

# Fairey

**FREEWHEELING HUBS**

## **BENEFITS**

**Up to 10% saving on fuel**  
**Reduced transmission wear**  
**Improved acceleration**  
**Longer tyre life**

**Exclusively approved by Land-Rover Ltd**

**Fairey Hubs have two indicated positions**

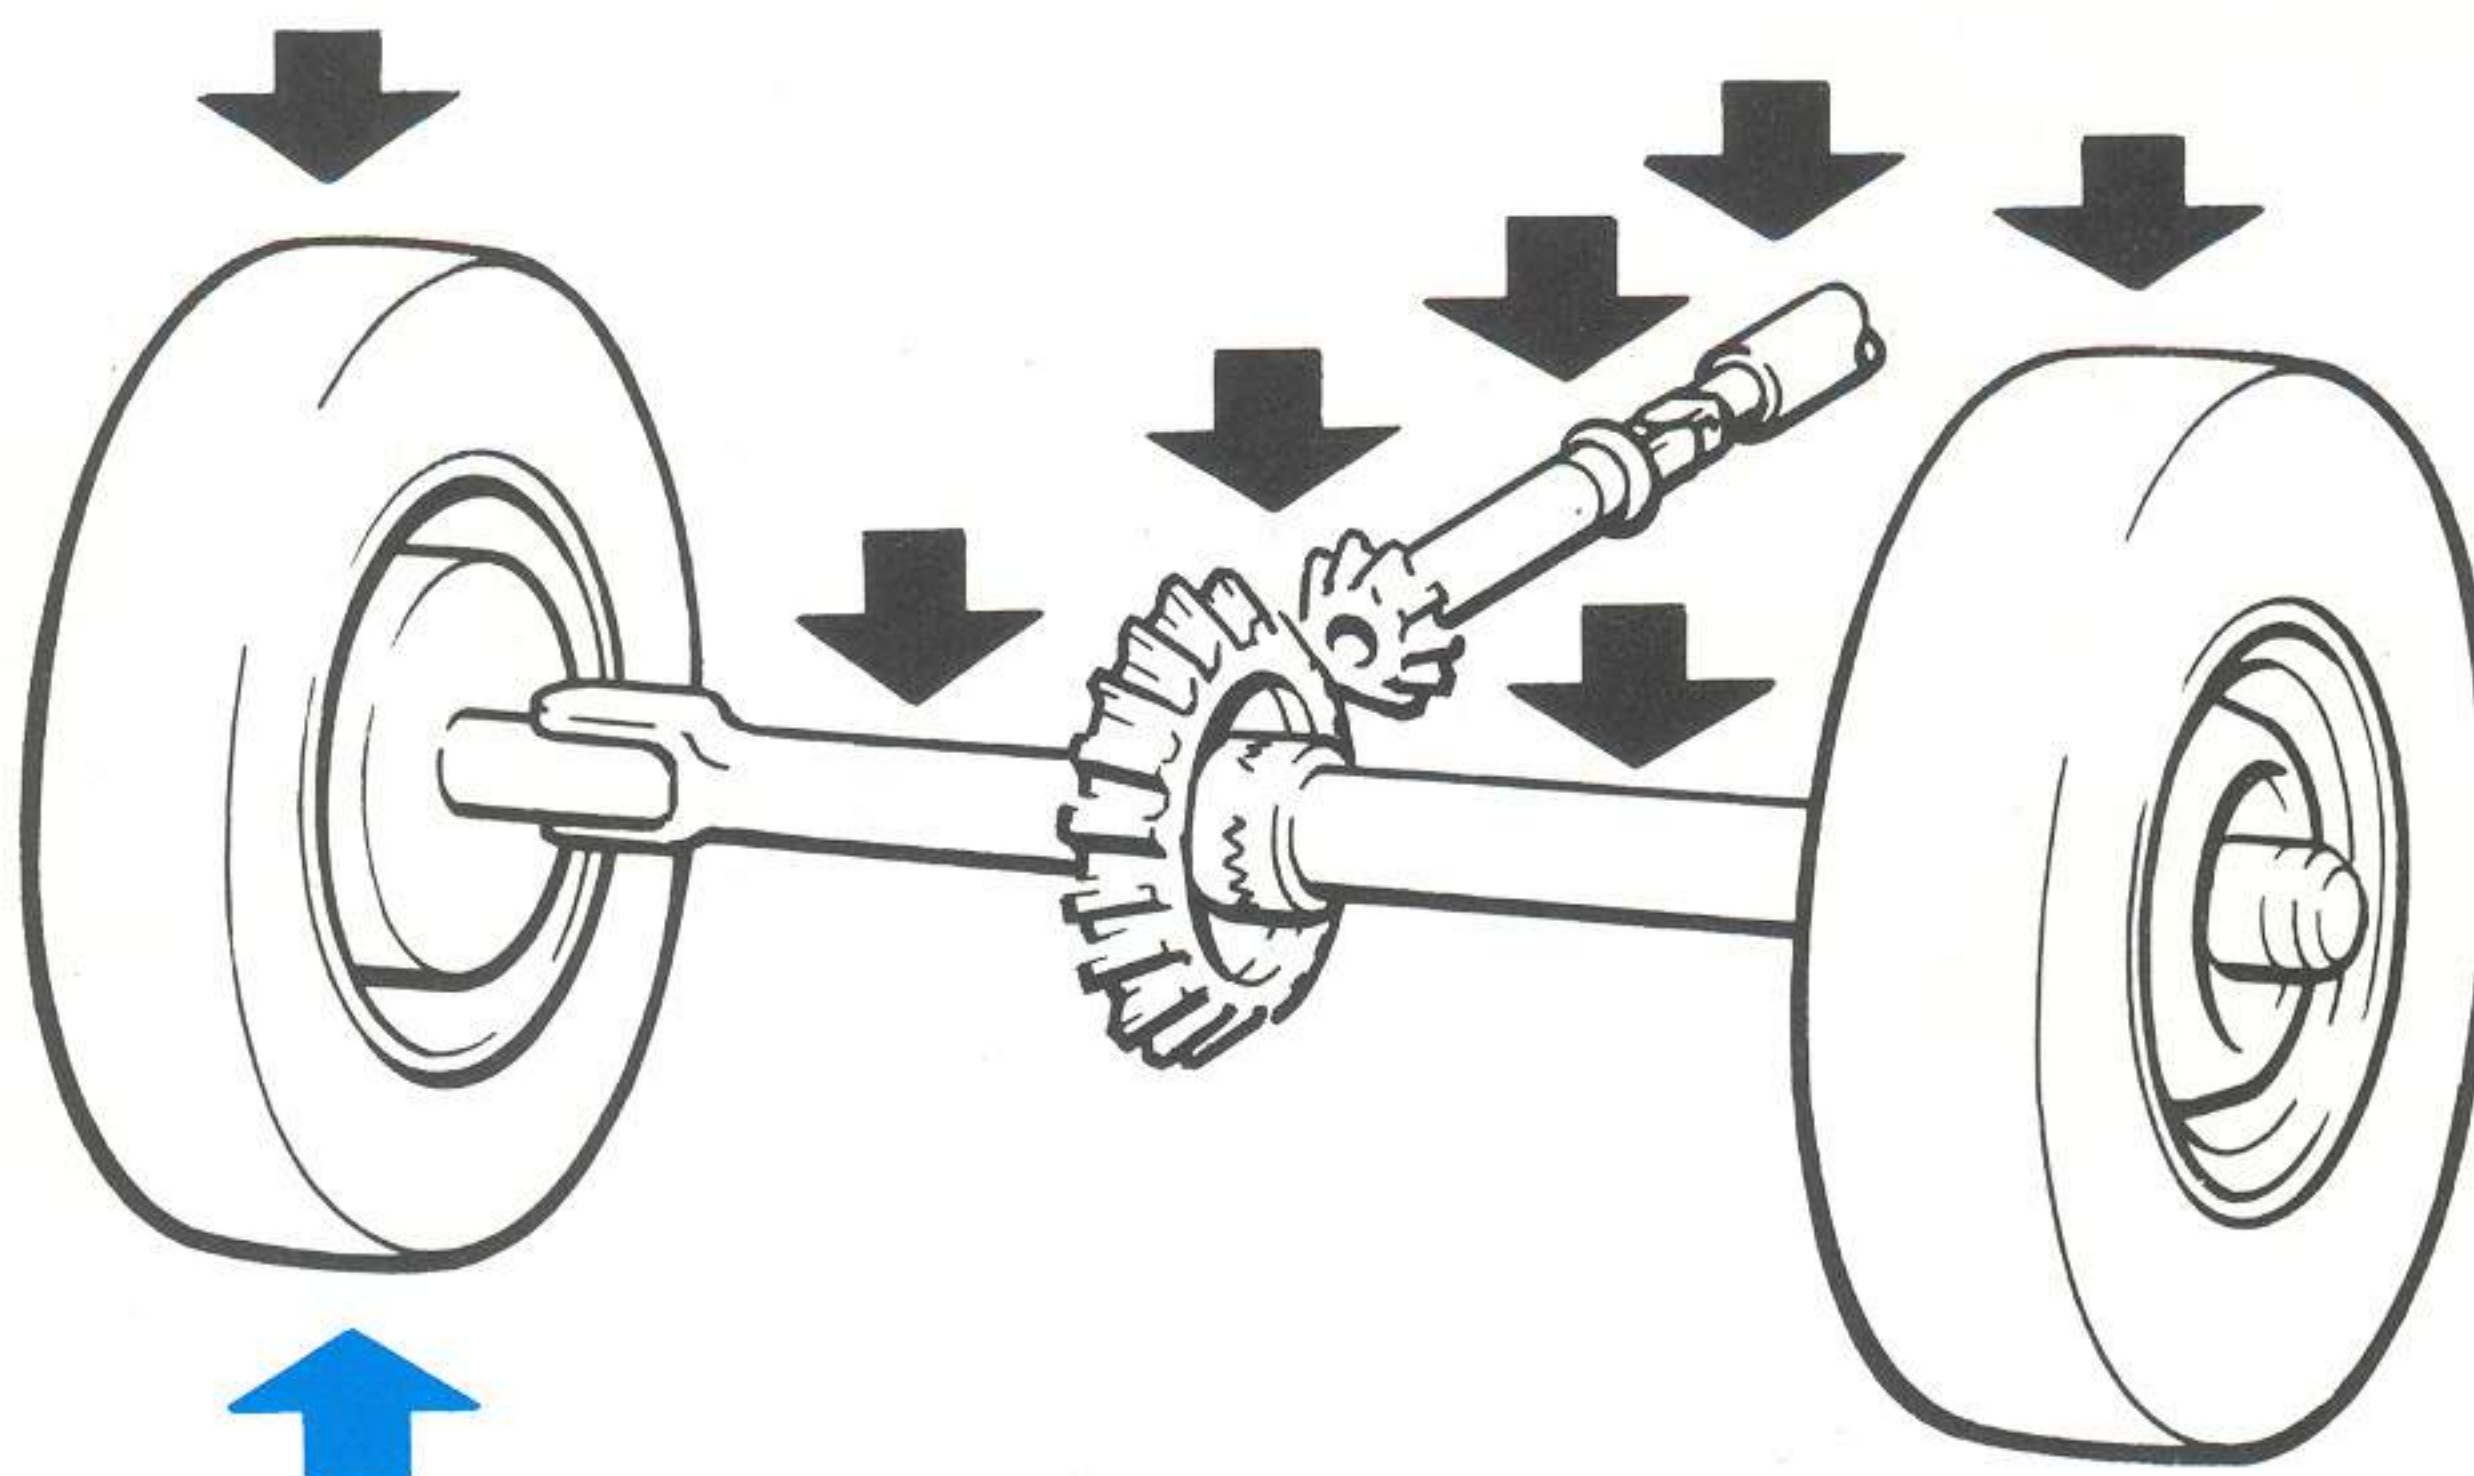

1. 4×2 for road use
2. 4×4 for off road use

Changing from one to the other is a simple hand operation. The patented system allows the user to **pre-select** the required position – **NO** rocking the vehicle or selecting neutral is necessary.

When the standard vehicle is operated on the highway the front wheels drive all of the front transmission parts – diagram below. With Freewheeling Hubs fitted all of these parts, except road wheels, are at rest, reducing front end drag, thus reducing transmission wear and tear while improving miles per gallon.

**Front transmission without hubs.  
Over 100 parts moving – wearing.  
High operation cost!**

**Front transmission with Fairey hubs.  
Only wheels move.  
Low operational costs!**
